

Understanding HVAC Systems

Does holding the door open let the cold air in,
or let the warm air out ?

Understanding HVAC Systems

Does holding the door open let the cold air in, or let the warm air out ?

Jendoco Construction Corporation has been, and remains, a leader in new construction and renovation in Western Pennsylvania for over 50 years.

In a continuous effort to improve the services we offer, Jendoco has teamed with **CJL Engineering**, a known expert in mechanical system design, to provide a detailed program on **heating, ventilation and air conditioning systems**.

This program will be conducted by

Alan Traugott, LEED AP A Managing Principal of CJL Engineering.

The seminar has been designed to increase the knowledge and expertise of your team and includes explanations on everything from "standard" systems (forced air, VAV/VVT, 2 and 4 pipe, heat pumps) to "exotic" systems (geothermal, passive solar, chill beams, solar cooling) and address the basic components, advantages, disadvantages and costs. (first vs. operational) for each of these.

In addition, we will look at sustainable systems and LEED implications pertaining to the built environment.

Jendoco would like to invite you to join us for this education experience. Come only for the overview and learn how to approach your environmental issues, stay for lunch, or choose both.

CJL ENGINEERING

Understanding HVAC Systems

Does holding the door open let the cold air in, or let the warm air out ?

Friday, April 17, 2009

Where:

Churchill Valley Country Club
Beulah Road, Pittsburgh, PA 15235 Phone: 412-243-7600

Schedule:

8:30 - 9:00	Registration and Continental Breakfast
